CLAIMS

WHAT IS CLAIMED IS:

- 1. An anti-IFNAR2 antibody selected from the group consisting of antibody 1F3 poduced by a hybridoma with ATCC Accession No. HP 12426 or progeny thereof, antibody 3B7 produced by a hybridoma with ATCC Accession No. HP 12427 or progeny thereof, and antibody 1D3 produced by a hybridoma with ATCC Accession No. HP 12428 or progeny thereof.
- 2. An anti-IFNAR2 antibody that competes for binding to IFNAR2 with the antibody of claim 1.
- 3. A polypeptide comprising a portion of the antibody of claim 1 or 2, wherein said portion comprises an antigen binding or a variable region of said antibody.
- 4. The polypeptide of claim 3, wherein said portion comprises at least one complementary determining region of said antibody.
- 5. The antibody of claim 2, wherein said antibody does not substantially block binding of a Type I interferon to IFNAR2.
- 6. The antibody of claim 5, wherein said Type I interferon is IFN α -2/1.
- 7. The antibody of claim 5, wherein said antibody blocks anti-viral activity of a first Type I interferon and does not block anti-viral activity of a second Type I interferon.
- 8. The antibody of claim 5, wherein said antibody competes for binding to IFNAR2 with antibody 1D3.

5

- 9. The antibody of claim 1 or 2, wherein said antibody is a monoclonal antibody.
- 10. The antibody of claim 1 or 2, wherein said antibody is a humanized antibody.
- 11. The antibody of claim 1 or 2, wherein said antibody is a human antibody.
- 12. A method of treating an immune-mediated disorder in a subject comprising administering to the subject the antibody of claim 1 or 2.
 - 13. The method of claim 12, wherein said immune-mediated disorder is selected form the group consisting of type I diabetes, type II diabetes, systemic lupus erythematosis and rheumatoid arthritis.
 - 14. A composition comprising the antibody of claim 1 or 2 and an excipient.
